SIMILARITY: Belongs to the ACBP family.
                                                                                              FUNCTION: BINDS MEDIUM- AND LONG-CHAIN ACYL-COA ESTERS WITH VER HIGH AFFINITY AND MAY FUNCTION AS AN INTRACELLULAR CARRIER OF ACYL-COA ESTERS. IT IS ALSO ACE TO DISPLACE DIAZEPAM FROM THE BENZODIAZEPINE (BLD) RECOGNITION SITE LOCATED ON THE GABA TYPE RECEPTOR. IT IS THEREFORE POSSIBLE THAT THIS PROTEIN ALSO ACTS AS A NEUROPEPTIDE TO MODULATE THE ACTION OF THE GABA RECEPTOR.
                                                                                                                                                                              J. Biochem. 216:623-629(1993)

PATHWAY: Histidine biosynthesis; first step. Very important in tregulation of histidine metabolism.

SUBCELLULAR LOCATION: Cytoplasmic (By similarity)

SIMILARITY: BELONGS TO THE ATP PHOSPHORIBOSYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                   CATALYTIC ACTIVITY: 1-(5-phospho-D-ribosyl)-ATP + ATP + 5-phospho-alpha-D-ribose 1-diphosphate

"RIKEN Arabidopsis full length cDNA clones (RAFLs) sequenced by the
SSP consortium (Salk/Stanford/PGEC).";
Submitted (SEP-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Transcription factor. Interacts specifically with the
box (5'-(T)TGAC(C/T)-3'), a frequently occurring elicitor-
responsive cis-acting element (By similarity).
-!- SUBCELULAR LOCATION: Nuclear (Probable).
-!- INDUCTION: By salicylic acid.
-!- INDUCTION: By salicylic acid.
-!- SIMILARITY: Belongs to the WRKY group II-d family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=20083487; PubMed=10617197;

J. 306:327-330(1995).

-i. FUNCTION: BINDS MEDIUM- AND LONG-CHAIN ACYL-COA ESTERS WITH VERHIGH AFTENITY AND MAY FUNCTION AS AN INTRACELLULAR CARRIER OF ACYL-COA ESTERS. IT IS ALSO ABLE TO DISPLACE DIAZEPAM FROM THE BENEZODIAZEPINE (BZD) RECOGNITION SITE LOCATED ON THE GABA TYPE RECEPTOR. IT IS THEREFORE POSSIBLE THAT THIS PROTEIN ALSO ACTS A NEUROPEPTIDE TO MODULATE THE ACTION OF THE GABA RECEPTOR.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                             Score
